

Diagnostic trends across selected WorldOlympiad pipelines

Physical faithfulness

Most selected pipelines are already strong

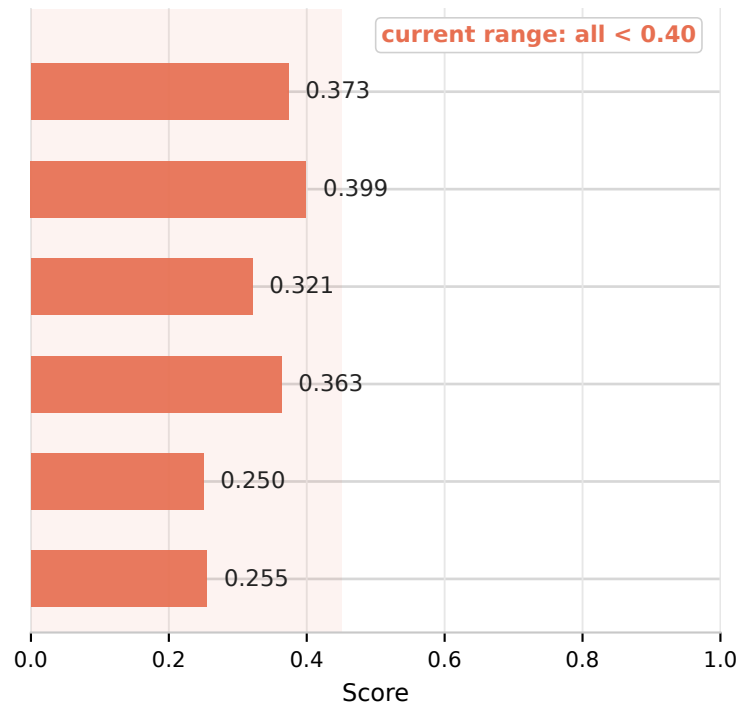

strong region: 5/6 ≥ 0.70

3D spatial consistency

Geometry remains the clearest bottleneck

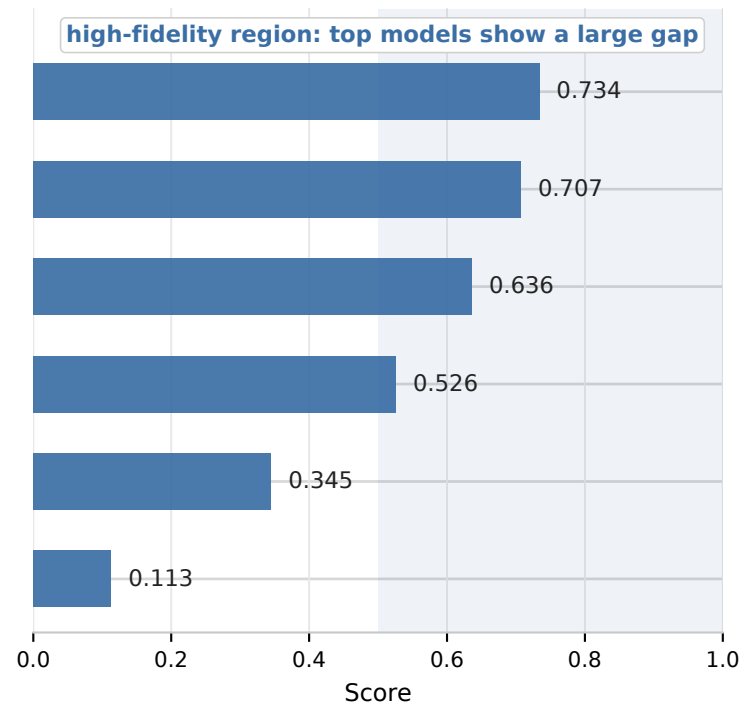

current range: all < 0.40

Interaction fidelity

Stronger pipelines separate more clearly

high-fidelity region: top models show a large gap

Scores are normalized to [0, 1]. Physical, 3D consistency, and interaction are model-level aggregates.
